Early or Delayed Retirement's Effect on Social Security Benefits

Full retirement age (FRA) is the age at which "full" Social Security retirement benefits – 100% of an individual's Primary Insurance Amount (PIA)¹ – are available. For many years, FRA was set at age 65. Beginning with individuals born in 1938, FRA gradually increases until it reaches age 67 for those born in 1960 or later.

If an individual chooses to receive retirement benefits before his or her FRA, the benefit paid is reduced to reflect the fact that income will be paid over a longer period of time. Similarly, if an individual chooses to delay retirement benefits, the benefit is increased for each year of delay (up to age 70) beyond FRA. The table below shows the effect of early or delayed retirement on an individual's retirement benefit, depending on the year of birth.

Retirement Benefit as a Percentage of the Primary Insurance Amount at Various Ages ²
